

Breakout sessions of the XIX International Forum-Contest of Students and Young Scientists "Topical Issues of Rational Use of Natural Resources"

№	Research areas
1.	Full-field development of oil and gas fields and transportation of crude hydrocarbons
2.	Physical and chemical technologies of processing of natural and technogenic raw materials
3.	Modern mining technology
4.	Modern technologies to ensure the construction of buildings, structures and facilities of the mineral complex
5.	Applied geology and geophysics
6.	Economics of sustainable development and global investment trends
7.	Information and telecommunication technologies and digital transformation
8.	Mechanical engineering
9.	Energy efficiency of production in the mineral resource complex
10.	Climate change, environmental protection and the principles of sustainable mining development
11.	Current problems and contradictions in the development of modern society
12.	Current problems and trends in architecture
